INSTRUCTION FOR AUTHORS

Manuscript evaluation
The manuscript is initially checked against the JADFA requirements and then at least two peer-reviewers are assigned for scientific evaluation. Typically, the manuscript will be reviewed and decision made within 2 months.

Manuscript preparation
The manuscript should be written in Times New Roman, 12 font size, double-spaced, and include the title, author name (s), company or institute, e-mail and mailing address, abstract and key words. The main body of a manuscript usually consists of introduction, material and methods, results, discussions, acknowledgement, and references. A running title of no more Ethan 50 characters should be also provided.

Abstract should outline the objective, method, main results and conclusion, 150–300 words are appropriate.

Key words should be given in 3–7 items or phrases.

The Introduction should provide a clear statement of the problem, the relevant literature on the subject, and the proposed approach or solution. It should be understandable to colleagues from a broad range of scientific disciplines.

Materials and methods should be complete enough to allow experiments to be reproduced. However, only truly new procedures should be described in detail; previously published procedures should be cited, and important modifications of published procedures should be mentioned briefly. Capitalize trade names and include the manufacturer’s name and address. Subheadings should be used. Methods in general use need not be described in detail.

Results should be presented with clarity and precision. The results should be written in the past tense when describing findings in the authors' experiments. Previously published findings should be written in the present tense. Results should be explained, but largely without referring to the literature. Discussion, speculation and detailed interpretation of data should not be included in the Results but should be put into the Discussion section.

Discussion should interpret the findings in view of the results obtained in this and in past studies on this topic. State the conclusions in a few sentences at the end of the paper. The Results and Discussion sections can include subheadings, and when appropriate, both sections can be combined.

Acknowledgments of people, grants, funds, etc should be brief.

Tables should be kept to a minimum and be designed to be as simple as possible. Tables are to be typed double-spaced throughout, including headings and footnotes. Each table should be on a separate page, numbered consecutively in Arabic numerals and supplied with a heading and a legend. Tables should be self-explanatory without reference to the text. The details of the methods used in the experiments should preferably be described in the legend instead of in the text. The same data should not be presented in both table and graph form or repeated in the text.
**Figure legends** should be typed in numerical order on a separate sheet. Graphics should be prepared using applications capable of generating high resolution GIF, TIFF, JPEG or Powerpoint before pasting in the Microsoft Word manuscript file. Tables should be prepared in Microsoft Word. Use Arabic numerals to designate figures and upper case letters for their parts (Figure 1). Begin each legend with a title and include sufficient description so that the figure is understandable without reading the text of the manuscript. Information given in legends should not be repeated in the text.

**References**
Only published or accepted manuscripts should be included in the reference list. Meetings, abstracts, conference presentations or papers that have been submitted but not yet accepted should not be cited. Limited citation of unpublished work should be included in the body of the text only.

Please use the following style for the reference list:

A reference identified by means of an author’s name should be followed by the date of the reference in parentheses in the text. When there are more than two authors, only the first author’s name should be mentioned, followed by 'et al'. In the event that an author cited has had two or more works published during the same year, the reference, both in the text and in the reference list, should be identified by a lower case letter like 'a' and 'b' after the date to distinguish the works. References should be listed at the end of the paper in alphabetical order.

**Examples**

**Published Paper**

Use of a DOI number to the full-text article is acceptable as an alternative to or in addition to traditional volume and page numbers.

**Electronic Journal Articles**

**Books**

**Book Chapters**

**Thesis**
Emre N, 2010, Determination of helminth fauna on European Sea Bass (*Dicentrarchus labrax* L. 1758) in Beymelek Lagoon, MSc Thesis, Süleyman Demirel University, Graduate School of NAS, 57.
